

## Jarod's Rocket Pitch

Jarod is going to an Engineering careers fairs to network with potential employers. They have prepared personal rocket pitches about themselves to highlight their skills. See below for his first attempt.

### First Attempt

My name's Jarod and I'm a student of Civil and Environmental Engineering at Imperial College London, where I hope to complete my project exploring developing more environmentally friendly structures. I'm developing technical abilities in materials science and I believe my team working skills, personality and work ethic would make me a valuable potential employee.

After getting some feedback Jarod re-wrote his pitch

### Second Attempt

Hi. My name's Jarod and I'm a **Master's** student studying structural engineering at Imperial College London. I'm really interested in combining my **chemical engineering background and interest in environmental issues with structural design principles** and I'm hoping to do my project in this area. I'm developing technical abilities in materials and structural dynamics through the modules I've chosen, and I've recently completed an assessment where I **developed a bridge that supported biodiversity** relating to my supervisor's research into different materials.

I enjoy working within teams of people from different backgrounds and particularly enjoyed being an active member of the **Emirates Environmental group** when I was doing my undergraduate degree in Dubai, where I learnt the importance of effective teamwork.

**Could you tell me more about** the types of projects your company works on please?
